Functionality:

The project serves as a tourism website. This website is built for a tourism company based in the States. Travel Buddy will help tourists check-out tourism packages. This is a one-stop shop site for tourists to plan their trips. Right from sight-seeing to hotel options every deal on the package is available for choice and with reviews. Tourists get to choose from the available packages.
We have the following pages on our website:

1. Home Page - This page tells what our website is about, the sign-up page is there and the places we offer to visit. A little search was done to see the most visited places in the states, of which 4 were selected. The website currently displays packages for Boston only.

2. Sign-in and Sign-up page – This page lets the user sign in to the site and see what all has he added to his backpack i.e. cart and what offers are available. It also offers the user to sign up for the newsletter.

3. Travel Tips – This page gives general tips a person should remember before he starts traveling. These tips were taken from reviews of people who told what mistakes they made on their trips.

4. Boston page – This page shows packages available, the map of the place and what all places can be visited during their trip.

5. Packages (1 & 2) – This page pop ups when one of the packages is selected from the Boston page. These pages give an insight of what is included in the packages and how much they cost. From there he can make a booking.

6. Thank You page – This page is redirected from the packages page, where you can enter the names of the people traveling and choose whether to confirm booking or to cancel it.

7. SiteMap – This page gives you an overview of what all is there on the website. We studied various websites and concluded that this is an important aspect from the users perspective because on one page he can see what all does the site offer and directly go that link

8. Help and Feedback – This page has FAQ's answered for the user, questions taken were general queries people had put up on various forums. On this page the user can ask questions other than the ones mentioned. General reviews of others have been provided.
